The existence of a Covered Bond Label does not represent any opinion by us about the creditworthiness of a Product, the value or price of a Product, the appropriateness of a Product's terms, or the Product's future investment performance. ## C. Harmonised Transparency Template - Glossary

The definitions below reflect the national specificities

ld Number	1. Glossary - Standard Harmonised Items	Definition
HG.1.1	OC Calculation: Actual	The Actual OC is the ratio between G.3.1.1 and G.3.1.2
	OC Calculation: Legal minimum	The legal minimum OC is 5%. However, this is not on a straight nominal basis, but takes into account a/o 80% of the property value. The calculation of the basis for
HG.1.2	-	legal OC can be found in the Belgian Royal Decree on covered bonds (art.6).
HG.1.3	OC Calculation: Committed	BNP Paribas Fortis commits to the legally required OC
HG.1.4	Interest Rate Types	Cover Assets: fixed until maturity and fixed with a periodic reset. Covered Bonds: fixed
HG.1.5	Residual Life Buckets of Cover assets [i.e. how is the contractual and/or expected residual life defined? What assumptions eg, in terms of prepayments? etc.]	For the buckets concerning 'Residual Life' (G.3.4), we take into account all monthly principal payments, comparable to tabs D.9 and D.10. This is consistent with t G.3.4 title "Cover Pool Amortisation Profile". Hence, we do not use maturity buckets for Cover Assets. Further, no prepayments are taken into account.
	Maturity Buckets of Covered Bonds [i.e. how is the contractual and/or expected maturity defined? What maturity structure (hard bullet, soft bullet, conditional pass through)? Under what	At the moment, only soft bullet has been issued. We only take into account the Maturity Date, not the Extended Maturity Date
HG.1.6	conditions/circumstances? Etc.] LTVs: Definition	As Belgium has general mortgages, we calculate LTV as the total borrower outstanding over the total borrower property value, resp. not indexed (M.7A.11) and
HG.1.7		indexed (M.7A.12)
HG.1.8	LTVs: Calculation of property/shipping value	Property values are those used in the loan underwriting procedure
	LTVs: Applied property/shipping valuation techniques, including whether use of index, Automated	Yearly updates of the property values are done using a national index calculated by the national institute of statistics in Belgium (StatBel).
HG.1.9	Valuation Model (AVM) or on-site audits LTVs: Frequency and time of last valuation	
HG.1.10	LIVS: Frequency and time of last valuation Explain how mortgage types are defined whether for residential housing, multi-family housing,	Indexation is done on a yearly basis
HG.1.11	Explain now mortgage types are defined whether for residential housing, multi-family housing, commercial real estate, etc. Same for shipping where relecvant	We filled in ND2 because the features of M.7A.13 refer to the underlying property and, because Belgium has general mortgages, it can not be applied to individ loans as all properties cover for all loans.
HG.1.12	Hedging Strategy (please explain how you address interest rate and currency risk)	Interest rate risk is monitored using NPV tests described by the regulator (NBB). Hedging is currently done with overcollateral. There remains the possibility to u swaps, as described in the Belgian covered bond legislation. No currency risk is expected as both assets and liabilities are in euro.
HG.1.13	Non-performing loans	Loans that are more than 90 days past due.
